

END OF WASTE

INNOVATION AND SUSTAINABLE PACKAGING MANAGEMENT.

The new European legislation on plastic.

APRIL 23, 2024 | 11:00 - 13:00

Forty percent of all plastic produced globally is used in packaging, representing a major environmental concern today because of its steady increase.

To address this issue, the European Commission has set a target of 2030 to make all packaging reusable or recyclable.

On April 23, LE2C is organizing a Dual Track Governance scenario building workshop where international experts in the field, representatives from institutions, industry associations, research and the industry world will address the challenges and opportunities related to the new plastics legislation and tools for efficient packaging waste management.

NATIONAL RESEARCH COUNCIL - CNR

Via Alfonso Corti,12 - 20133, Milan (Italy)

END OF WASTE

INNOVATION AND SUSTAINABLE PACKAGING MANAGEMENT.
